

Avoid curly fabrication problems with Polyfab's stentered heat-set fabric.

It sits flat, so you can work flat out

Polyfab has made a significant financial investment in purchasing a stenter to heat-set fabric making it much easier to use.

Stenter treated fabric lays very flat so it won't curl or roll up when being marked out, cut or sown. This means major savings in time and fabrication costs.

Stenter treated shade cloth also has less shrinkage and is more stable, while maintaining its strength and over 90% of its UV protection factors.

Polyfab's stenter treated shade cloth: your staff will appreciate its ease of use while you will love the cost savings.
